

We support eliminating organic material from landfills and incinerators across Minnesota and addressing food insecurity in our communities by prioritizing food waste reduction, supporting food rescue organizations, and expanding local composting programs that keep resources in the community, enrich our soil, and support environmental justice and public health.

- WHEREAS: diverting food waste from landfills reduces methane emissions, a potent greenhouse gas, helping Minnesota meet climate goals;
- WHEREAS: food rescue programs can provide millions of meals annually to Minnesotans experiencing food insecurity; WHEREAS: composting organic material locally improves soil health, water retention, and reduces the need for synthetic fertilizers;
- WHEREAS: communities near landfills and incinerators often face disproportionate environmental and health impacts, making waste diversion an environmental justice priority;
- WHEREAS: investing in local composting and organics infrastructure creates jobs and supports Minnesota's circular economy.

Please support the bill to eliminate organic material from landfills and incinerators across Minnesota and address food insecurity in our communities. This bill prioritizes food waste reduction, supports food rescue organizations, and expands local composting programs that keep resources in the community, enrich our soil, and support environmental justice and public health.

Diverting food waste from landfills reduces methane emissions, a potent greenhouse gas, helping Minnesota meet climate goals. Food rescue programs can provide millions of meals annually to Minnesotans experiencing food insecurity. Composting organic material locally improves soil health, water retention, and reduces the need for synthetic fertilizers.

Communities near landfills and incinerators often face disproportionate environmental and health impacts, making waste diversion an environmental justice priority.

The added benefit of investing in local composting and organics infrastructure creates jobs and supports Minnesota's circular economy.

I hope you will support this much needed, important bill to reduce waste and prevent having to open more landfills as well as preventing more methane from contributing to climate change.

Thank you,
